

## Cylindrical (Ø18mm) Type

### ■ Features

- Realizes long sensing distance (20m) (through-beam type)
- Superior noise resistance with digital signal processing
- High-speed response time under 1ms
- Power reverse polarity protection circuit, output short over current protection circuit
- Suitable for sensing in narrow space (narrow beam type)
- External sensitivity adjustment (except through-beam type)
- Light ON, Dark ON switchable by control wire (except through-beam type)
- Excellent environment-resistance performance with glass lens(BR4M)
- Protection structure IP66 (IEC standard)

**⚠ Please read "Safety Considerations" in operation manual before using.**

### ■ Specifications

Operation mode	Light ON	Dark ON
Receiver operation	Received light  Interrupted light	Received light  Interrupted light
Operation indicator (red LED)	ON  OFF	ON  OFF
Transistor output	ON  OFF	ON  OFF

※The transistor output will be held OFF for 0.5 sec after supplied power in order to prevent malfunction of this photoelectric sensor (except through-beam type).

※If the control output terminal is short-circuited or flows beyond the rated current, the control signal will not be output normally due to protection circuit.

## Control Output Diagram

### • NPN open collector output

### • PNP open collector output

※Before using this unit, select Light ON/Dark ON with control wire. (light on: connect control wire 0V / dark on: connect control wire with +V)  
 ※Control wire is only for Diffuse reflective/Narrow beam reflective/Retroreflective type.

## Installation and Sensitivity Adjustment

Install the sensor to the desired place and check the connections. Supply the power to the sensor and adjust the optical axis and the sensitivity as following.

For installing the unit, use M18 fixing nuts (accessories) with below 14.7N·m force for BR Series and 0.39N·m force for BRP Series.

### ◎ Diffuse reflective/Narrow beam reflective type

1. The sensitivity should be adjusted depending on a sensing target or mounting place.

2. Set the target at a position to be detected by the beam, then turn the sensitivity adjuster until position ㊸ where the operation indicator turns ON from min. position of the sensitivity adjuster.
3. Take the target out of the sensing area, then turn the sensitivity adjuster until position ㊹ where the operation indicator turns ON. If the indicator dose not turn ON, max. position is ㊹.
4. Set the sensitivity adjuster at the center of two switching position ㊸, ㊹.

※Be sure that it can be different by size, surface and gloss of target.

### ◎ Through-beam type

1. Supply the power to the photoelectric sensor, after setting the emitter and the receiver facing each other.
2. Set the receiver in center of position in the middle of the operation range of indicator by adjusting the receiver or the emitter right and left, up and down.
3. After the adjustment, check the stability of operation putting the object at the optical axis.

※If the sensing target is translucent body or smaller than  $\varnothing 15\text{mm}$ , it can be missed by sensor cause light penetrate it.

## ◎ Retroreflective type

1. Supply the power to the photoelectric sensor, after setting the photoelectric sensor and the reflector (MS-2) or reflective tape face to face.
2. Set the photoelectric sensor in the position which indicator turns on, as adjusting the reflector or the sensor right and left, up and down.
3. Fix both units tightly after checking that the unit detects the target.

- ※If using more than 2 photoelectric sensors in parallel, the space among them should be more than 30cm.
- ※If reflectance of target is higher than non-glossy white paper, it might cause malfunction by reflection from the target when the target is near to photoelectric sensor. Therefore put enough space between the target and the photoelectric sensor or the surface of the target should be installed at angle of 30 to 45° against optical axis. (when a sensing target with high reflectance near by, photoelectric sensing with the polarizing filter should be used.)
- ※Sensitivity adjustment: Refer to the diffuse reflective/narrow beam reflective type's.

- ※If the mounting place is too narrow, please use MS-4 instead of MS-2.
- ※Please use reflective tape (MST Series) for where a reflector is not installed.

## ■ Reflectivity by Reflective Tape Model

MST-50-10 (50×50mm)	80%
MST-100-5 (100×100mm)	120%
MST-200-2 (200×200mm)	140%

- ※This reflectivity is based on the reflector (MS-2).
- ※Reflectivity may vary depending on usage environment and installation conditions.  
The sensing distance and minimum sensing target size increase as the size of the tape increases.  
Please check the reflectivity before using reflective tapes.
- ※For using reflective tape, installation distance should be min. 20mm.
